

ABSTRACT

An animal shedding control device is provided including a first layer including a first material, wherein the first layer has a first layer perimetric edge, and wherein the first
5 material is hook material having hooks adapted to capture detritus, and a second layer including a second material, wherein the second layer has a second layer perimetric edge, and wherein at least a portion of the second layer perimetric edge is coupled to the first layer perimetric edge such that the first and second layers define a bag-like space that is at least partially enclosed. The first material may be micro-hook material, and the second
10 layer may be a nonwoven, elastomeric, or micro-hook material. The device may be a mitt, a pet bed enclosure, or a grooming tool cover.
